

Printable decision cards: when to kill a digital offer without sunk-cost guilt.
Educational checklist. Not financial, legal, or income advice. Adapt to your context.

How to use

Print or keep open beside your offer board. Score each live SKU weekly.
If 2+ red cards fire, kill or merge that week. No ceremony. Free the capacity.

CARD 1 - Traffic without sales

Kill/merge if: <1 sale after ~150 qualified landing visits,
or conversion <0.5% after a real distribution push.
Signal: people read and leave; the offer is wrong or invisible value.

CARD 2 - Refund heat

Kill/merge if: refund rate $\geq 25\%$ of paid orders,
or support time averages >20 minutes per sale.
Signal: buyers expected something else; fix copy or retire the SKU.

CARD 3 - Wrong product shape

Kill/merge if: buyers ask only for custom coaching/calls,
or keep requesting 1:1 review instead of using the PDF.
Signal: you sold a download; they want a service. Don't force it.

CARD 4 - Dead distribution

Kill/merge if: 0 sales in 14 days after ≥ 5 genuine posts
in relevant communities (value-first, not naked links),
OR heavy spam pushback (≥ 3 separate threads).

CARD 5 - Overlap / free substitute

Kill/merge if: buyers say it duplicates another offer,
or demand it free as a bonus to a sibling SKU (≥ 3 asks).
Signal: merge into a bundle; don't keep two near-clones.

CARD 6 - Confusion tax

Kill/rewrite if: FAQ/support shows people think it is software,
a course, or a guarantee - and one clarity rewrite fails.
Signal: positioning is broken; pause ads/posts until fixed or kill.

Weekly ritual (5 minutes)

1) List live SKUs. 2) Mark which cards fired. 3) Kill, merge, or double.
Double only after proof (repeat sales + manageable support).
Never attach personal or company brands to public offer copy.

Kill note template

SKU: _____ Date: _____ Cards fired: _____
Action: kill / merge into _____ / rewrite once then re-score
Capacity freed for: _____

Manystakes #02 - Instant digital download. Outcomes depend on your execution.
